

Order Picker Attachments

Order Picker Attachment - Order preparation operation or likewise called order picking as it is more commonly known is a method utilized in warehouse operations and consists of personnel known as order pickers. The order picker's task is to take and collect articles in particular quantities to be able to fulfill the customer's orders before shipment. Order picking is an easy warehousing process. The effectiveness in which this particular task is accomplished can be directly related to the productivity of a supply chain. Therefore, order picking is one of the most controlled logistic methods. Order picking falls within the category of the warehouse management system.

There are some certain types of order picking. The main kinds comprise: wave picking method, pick to box method, picker to part method or piece picking, zone picking method and sorting systems method.

The pick to box method comprises the order picker filling the box with the things from her or his station. The box then moves to the other picking stations until the customer order is done. In this method, there is no movement of the order picker employees. In the wave picking method, the order pickers move about to be able to collect the required things for several orders. The picker to part method or piece picking is similar where the order picker or pickers move to collect the items required but for one order only.

In the sorting systems method, there is no movement of the order picking workers. Instead, the stuff are brought to him or her via an automated system like for instance automatic storage or a conveyor system. In the zone picking method, every order picker is assigned to one particular area. They are responsible for just realizing order picking within this specified area.
